

# Phases of Recovery

## 1 The Problem

The **COVID-19 communicable disease pandemic** has had a severe impact on the cycle of business operations throughout numerous industries and organizations. As you begin to reopen business, it's important to have a proper plan in place to prepare and sustain your overall operations. When staff and personnel return to work, they will be challenged with:

- Maintaining a safe and healthy work environment
- Performing enhanced environmental cleaning and disinfection routines
- Changing business practices to maintain critical operations
- Establishing ways to become more productive, improve efficiency and minimize cost

## 2 Recovery Phases

Recovery is not a matter of if, but when, and preparing for, responding to and recovering from disruptions to your operations is going to be a big job. You need the right products and services to help ensure the health and safety of your workplace, employees, customers, tenants and/or visitors. Your Grainger rep can help you through the Phases of Business Recovery.

### Pre-Occupancy/Pre-Start-Up Phase

Start planning and preparing to resume operations and have employees return to work. The stages within this phase are hazard recognition, engineering controls, safe work practices, and basic infection prevention, planning and preparation.

### Occupancy Phase

When business is operating and employees have returned to work, the focus shifts to executing on daily responsibilities and tasks in the "new normal." The stages in this phase are communication and re-establishing operations and preventative maintenance projects.

### Sustaining Business Operations Phase

At this stage, standard business practices are in place, steady state operations have been achieved and the focus shifts to continuous improvement.
