

You cannot clean your way out of COVID-19.

Our current strategies are too vulnerable to human error and noncompliance.

We need a smarter strategy to return safely to a more natural use of our public indoor spaces.

making a **CASE**

What if safety wasn't dependant on not missing a spot while cleaning?

What if you had a "mask" for your entire environment?

CASE Approved Strategies take the human error out of the equation, keeping your facility clean and inhabitants protected without the guesswork.

Continuous.... Must continually provide protection as soon as new pathogens are introduced into the environment.

Active..... Must actively eliminate pathogen on contact with air and/or surface around the user.

Safe..... Must be safe to apply/use indoors while humans are present. No harmful carcinogens or other contaminates produced.

Ease of use... Must allow users of the space to be more normalized and natural in their use of the environment.

Long-lasting protection and peace of mind.

It's Nanoed™ Barrier Technology applied to your surfaces once every 30 days creates a barrier only nanometers thick, preventing harmful microbes from attaching to the surface and destroying them on contact (*similar to a balloon landing on a bed of nails.*) The overall result is a surface which “mechanically kills” pathogens before they can adhere and spread. Utilizing the same nano barrier technology - It's Nanoed™ Hand Sanitizer last 8 hours on skin and, unlike alcohol-based hand sanitizers, poses no risk when inhaled or applied to the skin.

99.99% effective against most common germs, bacteria and viruses.

FDA & EPA Approved. All organic ingredients.

Surface barrier effective against pathogens for 30 days.

No alcohol or harsh chemicals. Poses no risk when inhaled or applied to skin.

VOC free. Doesn't require use of special PPE to apply.

With It's Nanoed Barrier Protection and Hand Sanitizer you can return students and teachers to a more natural and connected hands on learning experience - **safely.**

For a more detailed presentation on It's Nanoed reach out to our experts today.
