SportMaster Athletic & Recreational Surfacing Systems

SportMaster produces surfacing systems for many different recreational activities. Many of our coating systems can cross over and be used for different sports and recreational areas. We also have some surfaces that are tailored for specific sports to:

- Enhance player performance
- Extend the surface life, based on the level of play
- Offer textures or colors relevant to the sport or activity
- Increase player comfort

Tennis Court Surfaces

SportMaster tennis court surfaces are available in 16 standard colors, and a variety of packaging options. There are over 90 stocking locations throughout the United States and additional distributors and installers around the world.

SportMaster is the only U.S. brand to have all 5 ITF (International Tennis Federation) pace classifications. That means you can select your preferred speed of play, factory-mixed, in all of the following ITF paces: slow, medium-slow, medium, medium-fast, fast.

The SportMaster ProCushion system adds rubberized sub-layers and provides a softer playing surface without affecting the spin-responsive play and bounce.

SportMaster tennis surfaces are the choice of multiple ATP and WTA events, including Citi Open in Washington DC (ATP 500 series, Pro Tour Event) & The Connecticut Open (WTA and US Open Series) at Yale University.

Basketball Court Surfaces

Basketball is such a popular sport that sometimes the courts get very high traffic and wear, especially in the lane or key area.

SportMaster offers high-performance acrylic surfacing systems that are enhanced with tougher resins to provide additional durability, when compared with traditional tennis court coatings. With our ColorPlus pigment system, you can still use all 16 standard pigment colors in the durable base coating.

Looking for shock absorption on the knees and body? Just add our ProCushion base layers to get a variety of cushioning options.

Pickleball Court Surfaces

Pickleball is one of the fastest growing sports, and pickleball courts are popping up all over the country. Like some of the other sports, pickleball courts have specific wear patterns. Due to the extreme popularity of the sport, SportMaster has surfaces that are designed to stand up to the constant play.

Like our other surfacing systems, a variety of surface textures and cushioning levels are also available in our pickleball court surfacing systems.

Multipurpose Courts

Multipurpose courts with blended lines are becoming a popular trend. Talk to your local SportMaster representative and they can provide recommendations on our best system, to match the type and frequency of play. A few common combinations are tennis courts with blended basketball court lines, or adding pickleball lines to a basketball court.

Roller Hockey & Roller Sports

The SkateMaster system is ideal for roller hockey, skateboard parks, roller derby, or any areas where roller sports are played. This surfacing system is available in all 16 standard colors, and is fortified with a hard acrylic binder to withstand the rigors of roller hockey and other roller sports. Minimal to no texture is added to the SkateMaster surface layers, to provide a smooth surface for extended wheel life and sliding of a puck. Also great for shuffleboard surfaces.

Playground and Recreational Areas

Another common application, with SportMaster surfacing systems, is playgrounds and other recreational areas. From games like hopscotch and 4 square, to intricate designs and maps, our acrylic coatings provide great aesthetics along with a safe non-slip texture for wet or dry surfaces.
