

Facility Service

ACCO Engineered Systems was founded as Air Conditioning Company in 1934 in Los Angeles. The former name of the company was chosen to indicate what the company did because few people knew about air conditioning. In 2002, the name was changed to ACCO Engineered Systems to better reflect the growing catalog of products and services we offer our customers. The company has grown over the past 87 years to become the largest mechanical contractor in the western United States. ACCO is the premier leader in the design, installation and service of technical systems in commercial air conditioning, heating, ventilation, plumbing, piping, process piping, underground site piping, low temperature refrigeration, building automation and electrical systems.

Contractor's License #120696 (A, B, C-4, C10, C16, C20, C36 & C38)

ACCO has one of the largest and most experienced service departments in the nation, specializing in HVAC, plumbing, and specialty services. We provide service and long-term maintenance agreements to over 9,000 accounts covering close to 19,000 facilities throughout the Western United States. Our 600+ fully equipped vehicle-based field mechanics are dispatched via our 24/7 toll-free emergency service line and can respond on site in less than 4 hours.

ACCO's growth over the past decade has been record-breaking with the company achieving revenues of \$1.6 billion last year. We now have roughly 5,000 employees spanning California, Oregon, Washington, Idaho and Nevada.
