

CYBERSECURITY

Navigate cybersecurity challenges with the help of **Forward Edge**, the emerging leader in next-generation cybersecurity solutions designed specifically for the K-12 environment.

Our Solution Protects, Detects, and Responds.

Our solution is aligned to NIST Standards, outlined by corresponding color in the graphic above

Forward Edge safeguards your district with best-in-class intelligence driven strategies:

Deployment of multi-layered Next Generation security technology defenses used by Fortune 500 Companies

24/7 Monitoring of Districts' Network Environments by a Security Operations Center staffed by security engineer professionals

Implementation of Best Practices that align with the Center for Internet Security and National Institute of Standards and Technology cybersecurity framework controls

Advanced Cybersecurity Awareness Training Designed Specifically for the K-12 environment

An Important Addition to a Layered Approach: MFA

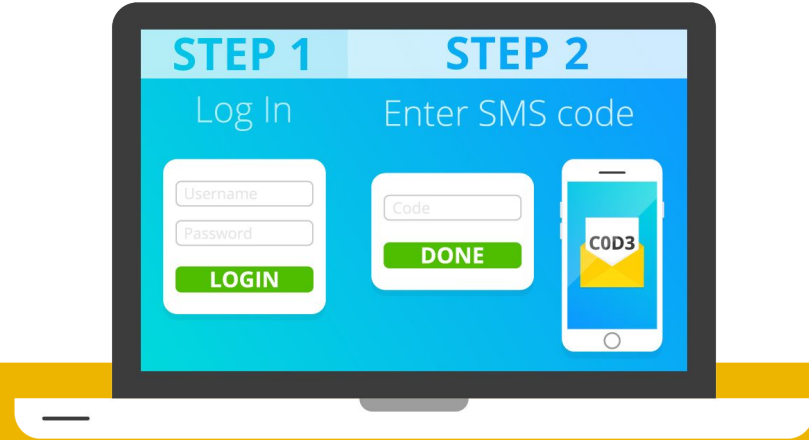

Does Your District Have Multi-Factor Authentication (MFA)?

MFA is Important for accounts that have privileged access to resources.

Multi-factor authentication is a process where a user is prompted during the sign-in process for an additional form of identification.

MFA Requires Two or More Authentication Methods:

- 1 Something you know, typically a password
- 2 Something you have, a trusted device like a phone or hardware key
- 3 Something you are - biometrics like a fingerprint or face scan

Access to Email

Local Device Access

Remote Network Access

Authentication for Infrastructure

A Critical Security Tool in Cybercrime Defense

IT'S EFFECTIVE

It's particularly important for accounts that have privileged access to important resources.

IT'S NECESSARY

"Universal" deployment of MFA is widely understood to be a nonnegotiable network access feature to secure Cyber Liability Insurance Coverage.

Discover Our MFA Solution.

Double Your Login Protection. Implement MFA.
