

# DESIGN AND CAD SERVICES

Unlock the potential of your healthcare facility with custom healthcare environment and advanced storage solution Design and CAD services.

We understand that creating efficient workflows and optimized storage spaces is essential for seamless operations and next level patient care. Our team of experienced designers combines extensive knowledge of healthcare equipment with technical CAD tools to ensure you are purchasing the best equipment for your space and workflow.

## EXPERIENCE THE BENEFITS OF CUSTOM DESIGN AND CAD SERVICES:

### CUSTOMIZED SOLUTIONS

We can help you make the most of your available space, and by extension help increase workflow efficiency, through architectural drawings that show you down to the inch how your space is being used. We also offer onsite space evaluation when dimensioned drawings are not available.

### ADVANCED STORAGE SOLUTIONS

From sterile supply rooms to pharmaceutical storage, we integrate innovative storage solutions to maximize limited space and improve accessibility and organization. Typically, a high density storage system increases storage by a minimum of 30%.

### EXPERTISE IN HEALTHCARE EQUIPMENT

Our in-house experts have extensive medical equipment expertise. This knowledge, coupled with our focus on functionality, ensures that your equipment will be positioned to maximize workflow efficiency.

In addition to in-depth Design and CAD expertise we understand the complexities of acquiring healthcare equipment. From the project manager coordinating your order and the logistics teams in the warehouse managing storage, assembly, and staging to our in-house delivery teams and after the sale biomedical service teams, we are your one-stop-shop for healthcare equipment.

We can help you revitalize and develop your healthcare environment with confidence.

### COMPLIANCE AND SAFETY

With an eye to improving operational safety, our custom designs incorporate compliance with the required government and engineering codes as well as healthcare regulations and safety standards.

### VISUALIZATION AND COLLABORATION

Our CAD Engineers will provide you with in-depth drawings so you can make informed decisions. We also collaborate closely with your team continuously to ensure designs are aligned with both the needs of end users and facility wide objectives.
